

Blaupunkt showcases special innovations in built-in appliances
From island hood with lift function to
built-under wine cooler

September 2022. The environment is stylish. Immersed in an elegant lounge ambience, Blaupunkt is presenting new built-in appliances at this year's Häcker Kitchens in-house exhibition, which will captivate your attention in more ways than one.

Anyone who enters the Blaupunkt area of the in-house exhibition quickly notices that the appliances blend perfectly with the high-quality kitchen environment. The same can be said of the appliances themselves, which boast some impressive novelties.

First and foremost, the new island hood with lift function, which defines new standards in design and functionality. Made of glass and stainless steel, the cooker hood has a completely new technology that allows the entire body of the hood to extend and retract. If the cooker hood is not needed, it can be conveniently retracted to below the ceiling. It thus disappears from the field of vision and can be used as lighting. What's more, the height is infinitely variable.

"With the new island hood with lift function, we are offering our customers an innovation that is typical of the Blaupunkt brand. It combines a beautiful design with a high level of functionality", says Olaf Thuleweit, Managing Director at HK Appliances.

Speaking of extractor fans, Blaupunkt scores with another innovation: a hob with integrated fan that is installed directly under the hob. What does it mean? In short, the fan motor is integrated directly into the hob, giving retailers more planning freedom when it comes to air routing, and extracting the fumes directly where they arise. Additional advantage – the installation of the device is also much easier thanks to the built-in technology.

Refrigerators brought to perfection

Before you start cooking, of course, the food must be well refrigerated. Customers looking for an extraordinary experience, will find it in Blaupunkt's new range of cooling devices. Customers can now generate a sort of "built-in side-by-side solution," as was previously only possible with freestanding units. One side has an integrated 178 full-size freezer and on the other side a 178 full-size refrigerator, providing more planning options for an aesthetic kitchen design.

Temperature-controlled in the base cabinet: the new wine cooler

For all wine lovers, Blaupunkt has a new, elegant build-under wine cooler that can hold up to 53 bottles. The black glass front allows a clear view of the contents. Handleless opening technology allows smooth and easy operation. In addition, the device is equipped with many functions for modern wine cooling.

From solid wood shelves to anti-vibration system, it comes with a wealth of features that ensure a perfect climate for fine wines.

Together with Häcker Kitchens, the brand Blaupunkt has developed extremely positively in recent years, and now offers a product portfolio that meets almost all customer requirements. Therefore, the trade fair motto "No Limits" is also a perfect fit for Blaupunkt, because consistent kitchen planning succeeds best with matching built-in kitchen appliances. Here, the exhibition provides a lasting demonstration of how well Blaupunkt built-in kitchen appliances can be integrated into design-oriented interiors.
